Objective: Apply Junior Web Developer

Dear Mr. Nhem Sophal,

I am writing to express my strong interest in the position of Supporting Staff for FM (Financial Management) Software Development under the Second Higher Education Improvement Project (HEIP2) at the Institute of Technology of Cambodia. As a graduate in Information and Communication Engineering from ITC, I am eager to contribute my technical skills and practical experience to support the development and maintenance of the FM software system.

I hold a Bachelor's degree in Information and Communication Engineering and have hands-on experience in developing multiple web application projects, where I worked on both backend and frontend components. My technical background includes proficiency in PHP, Node.js, and experience using Laravel for backend development, as well as Vue.js and React for building responsive and user-friendly interfaces.

In addition, I have experience working with RESTful APIs, system integration, and database management using MySQL and PostgreSQL. I am familiar with the software development lifecycle, basic project management concepts, and collaborative development using Git version control. Through academic and project-based work, I have developed strong problem-solving skills and the ability to work effectively within a team environment.

I am highly motivated to support the successful implementation of the HEIP2 project and to contribute to improving financial management systems at ITC. I am confident that my technical skills, commitment, and willingness to learn will allow me to add value to the project and meet its objectives.

Thank you very much for considering my application. I would welcome the opportunity to further discuss how my qualifications and experience align with the requirements of this position.

Yours sincerely,

POM MOUYLANG
